

Tor Hidden Services

Aggregate statistics about the number of hidden service descriptors from multiple HSDirs

Median statistics to ensure robustness

Problem: Computation of statistics from collected data can potentially de-anonymize individual Tor users or hidden services

Private Tor Statistics

We rely on:

- A set of authorities

- A homomorphic public-key scheme (AH-ECC)

- Count-Sketch (a variant of CMS)

Setup phase

- Each authority generates their public and private key

- A group public key is computed
